Registrar, i/c
TamilNadu, Dr. Ambedkar Law University

ABOUT CYBER SECURITY

Cybersecurity is the application of tools, technologies, policies, processes, controls, and procedures in the protection or recovery of networks, devices, systems and applications from digital attacks. The digital attacks are aimed at accessing, destroying and altering sensitive data, disrupting workflows and extorting money.

Cyber criminals deploy a broad range of attack types against organizations and individuals in order to compromise data confidentiality, integrity and availability. At the organization level, a cyberattack could result in data loss, disruption to operations, ransom demands, industrial espionage, regulator censure and loss of reputation.

An integrated, automated approach to cybersecurity and cyber resilience results accelerates the detection, remediation and investigation of cyber threats.

As a part of cyber jagrukta diwas, this educational documentary movie will be showcased which will depict different insights and fetch clarity on cyber safety.
